\* Vertical depth below surface collar, may vary if hole is re-surveyed.

\*\* Intersections widths are the measured down hole length and should not be assumed to be the true width of mineralisation.

\*\*\* Assays are composited based on a minimum grade of 0.3 g/t Au with an internal dilution of 0.005g/t over 2 meters and edge grade of 0.25 g/t permitted. No capping of higher values has been applied. . Values are rounded up to two decimal places

NB Higher grade but narrower width intersections may be reported where edge grade is removed.

Hole ID	Prospect / zone	X_UTM	Y_UTM	Azimuth (°)	Dip (°)	mFrom	mTo	Depth*	Width (m)*	g/t Au**
---------	-----------------	-------	-------	-------------	---------	-------	-----	--------	------------	----------

Conversely, wider but lower grade zones may be reported.

This table includes composited assay results for the "Phase III" reverse circulation and diamond drilling programme; Tijirit Project received between 1st September to 31st October 2017.

All samples are collected under the supervision of Algold geologists who operate in accordance with the Company's Drilling and Sampling Standard Operating Procedure . Certified reference material, blanks and field duplicates are inserted to monitor laboratory performance. All samples were delivered under Company supervision to the SGS Laboratory in Bamako, Mali where they are prepared and analysed. Quality control and quality checks (QAQC) are made on receipt of results to ensure they pass industry recognised criteria (in accordance with guidelines provided by the CIM) prior to reporting.
